

Vitamin C Kills Cancer

Vitamin C is probably the best known vitamin in the human body and although its use in the beauty industry have long been established, its use as a effective and safe treatment for the management of chronic degenerative disease has largely been forgotten. National Institutes of Health scientists have confirmed the concepts that Vitamin C is selectively toxic to cancer cells and that tumor-toxic levels of Vitamin C can be attained using intravenous administration. The article, published in the September 12, 2005 issue of the Proceedings of the National Academy of Sciences concluded, "These findings give plausibility to intravenous ascorbic acid in cancer treatment"

Intravenous Vitamin C

Tel: 011 452 4703

The importance of Vitamin C has been traced as far back as 1550 BC in Egyptian papyrus scrolls. The discovery of the treatment of scurvy with fresh lime juice by James Lind in 1753 was considered classified information by the British Government, and led to the subsequent colonization of the British Empire.

Recent Research (2005) by the National Institute of Health in America has confirmed the research by the famous two time noble laureate Dr Linus Pauling. Dr Pauling as well as many other prominent scientist have known for years of the benefit of Vitamin C in the human body.

Vitamin C has numerous function in the body including increasing hormonal activity, boosting the immune system, lowering dangerous cholesterol (LDL, Triglycerides, lipoprotein - a) and increasing iron absorption. The following before and after photos taken on a Darkfield Microscope show the clinical improvement to the health of the blood from intravenous Vitamin C Treatment

Before

After

The health of the red blood cells increases dramatically. This can be seen through the improved shape and the clear separation between the cells when compared to the clumped unhealthy cells in the first picture.

One of the greatest benefits of Vitamin C in the management of cancer is that the patients notice a marked improvement in well being and quality of life when receiving treatment. As opposed to the degrading effects of chemotherapy and radiation treatment.

Vitamin C can be used in conjunction with conventional treatments and reduces the toxicity of chemo drugs as well as enhancing their effect.

Vitamin C can also be used to prolong the life and improve the quality of life for the terminally ill.

Many clinical benefits to Vitamin C

Vitamin C is extremely effective in a number of disease states, including conditions affecting the liver. Used in the treatment of Hepatitis and liver damage Vitamin C shows remarkable curative and detoxification effects. Vitamin C enhances the body's immune function and is safe intravenously even in high dosages.
