

INTRAVENOUS HYDROGEN PEROXIDE

Hydrogen Peroxide is found in abundance in the body. It has two primary functions. Firstly it controls certain biochemical reactions, such as ATP function or cellular metabolism, enzymatic reactions and hormonal levels. Secondly it is a powerful oxidizing agent used by the immune system to kill off harmful bacteria, viruses and other pathogens. The use of Intravenous Hydrogen Peroxide is extremely safe and assists in correcting cellular metabolism as well as boosting the bodies natural defence against disease.

CONDITIONS THAT CAN BENEFIT FROM THE USE BIO-OXIDATIVE THERAPIES

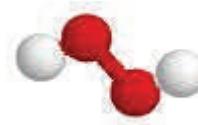

Intravenous Hydrogen Peroxide stimulates the immune function of the body and is thus very effective in the treatment of acute infection as well chronic degenerative disease.

Common colds and flu or any type of acute viral or bacterial infection respond extremely well to this type of treatment. Intravenous hydrogen peroxide has been used very successfully in the treatment of Candida and other systemic fungal infections, Chronic fatigue especially Epstein Bar and Lupus, Asthma and Chronic Bronchitis, Chronic Viral infections such as Glandular Fever, Influenza and Herpes. It is also useful for immune disorders such as Multiple Sclerosis, Rheumatoid Arthritis, Cancer and Diabetes. It can also be used in the treatment of Heart Disease.

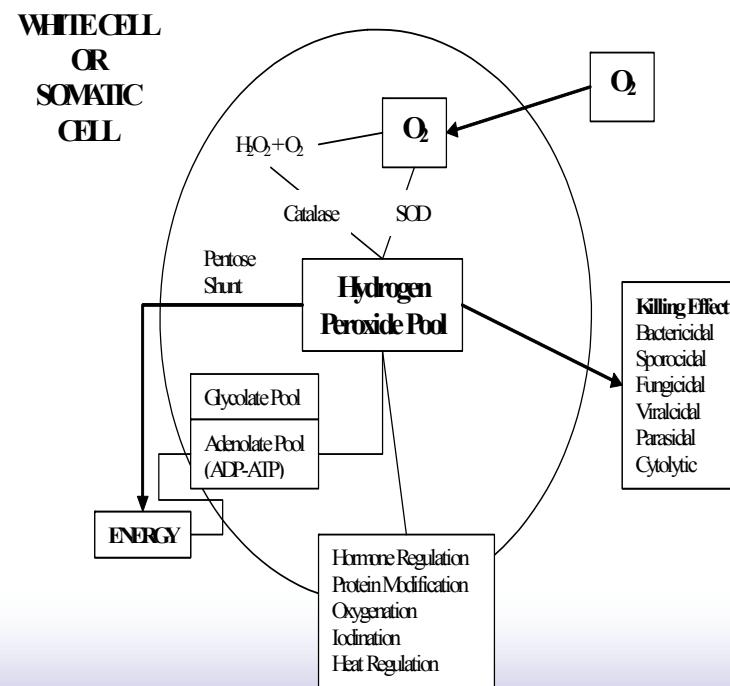

HOW DOES IT WORK?

Hydrogen peroxide or H₂O₂ is found in every cell in the human body. It is an important chemical in the control of cellular oxidation and metabolism.

Intravenous Hydrogen Peroxide raises partial oxygen levels by releasing singlet oxygen into the body by breaking down into water and oxygen through the release of the extra oxygen molecule. (H₂O₂—H₂O + O). It has a powerful effect on the body's immune function. This is due to the fact that our body's white cells use hydrogen peroxide to oxidize harmful pathogens including virus and bacteria.

HISTORY OF H₂O₂ THERAPEUTICS

Hydrogen Peroxide, the basis of Oxidative Medicine was discovered by the French chemist, Louis-Jacques Thenard, in the year 1818. In 1898 I.N. Love reported his successful use of H₂O₂ for treating scarlet fever, diphtheria, pneumonia, and uterine cancer in the Journal of the American Medical Association. In the Lancet in 1920 Oliver and Cantab, presented a paper on intravenous hydrogen peroxide. They were military physicians treating Indian Gurkha soldiers, they encountered 80% mortality among soldiers who developed pneumonia. In their landmark paper, they reported more than 50% reduction in mortality! Research into Hydrogen Peroxide came to a standstill until the groundbreaking research of Dr Charles H. Farr MD PhD in 1989. Dr Farr proposed the idea that there was a pool of hydrogen peroxide found in the body that regulated important chemical functions. Dr Farr was the founder of and chairman of I.O.M.A. or the International Oxidative Medical Association. The I.O.M.A. Protocol is still the leading protocol today and is used by Nutritherapy.
